

The room you live in, *reimagined*.

Roomly is an AI interior design app. Snap a room, pick a style and a budget, and see that same room transformed.

The featuring brief

What it is	Interior design for the room you already have: photograph it, get that same room redesigned
Why feature it	Every result is checked against the original photo (windows, doors, room lines) and carries a verdict
Devices	iPhone and iPad; Android phones and tablets
Languages	The app is in 13 languages; the App Store pages, screenshots and this kit are in 14
Styles	70, across interiors, house exteriors and gardens
Business model	Free download. Creating designs requires Roomly Pro, a subscription.
Privacy	On iPhone and iPad, consent is asked before the first photo is sent. No tracking. Deleting the account removes everything.
Developer	Bridge Softwares, an independent studio

Already in the app

Sketch to Design

Upload a black-and-white architectural sketch of a room and get it back as a redesigned room.

✓ Approved · one sentence

Roomly is an interior design app for iPhone, iPad and Android that uses AI to redesign the room in your own photo in one of 70 styles, then checks the result against the original photo and labels it with a verdict.

✓ Approved · one paragraph

Roomly is an interior design app for iPhone, iPad and Android, made by the independent studio Bridge Softwares. Users photograph a room they live in, choose one of 70 styles, set a budget and decide how much should change. Roomly uses AI to return a redesign of that same room, together with the list of changes behind it. Every result is checked against the original photo, comparing windows, doors and room lines, and carries a verdict. Roomly is free to download, with a Roomly Pro subscription for creating designs, and the app is available in 13 languages.
